PARAKEET MFMA TEAM / BASELINE PACK

Blue.
Yellow.
Parakeet.

A recognizable parakeet with a yellow face, blue wing, curved beak and long tail. The bird sits inside a white circular badge; the flowing wordmark carries the team's racing identity.

Evergreen team identity / Vector, print and social package

01 / PALETTE AND USE

Keep the bird badge white.

In both full-color versions, the badge interior is opaque white. The surrounding logo background remains transparent. Single-color marks use open negative space for one-ink production.

COLOR	HEX	USE
Racing blue	#0064D8	Wordmark and circular border
Parakeet yellow	#FFE100	Face, border and accents
Wing blue	#009EEB	Bird wing and feather shapes
Detail navy	#07356F	Eye and feather definition
White	#FFFFFF	Interior of the full-color badge
Backdrop navy	#061A36	Social artwork backgrounds

Choose a mark

Primary: horizontal placements. **Stacked:** square or portrait placements. **Wordmark:** name-only placement when the bird is already nearby. **Emblem:** badges and small icons.

Use **light-bg** on white/light surfaces; its MFMA TEAM subline is blue. Use **dark-bg** on dark surfaces; its subline is yellow. **Black** and **white** are true single-color alternatives.

Size and clear space

Allow clear space of at least one quarter of the badge diameter around the complete mark. Keep proportions fixed. Start with the primary at 320 pixels or 70 mm wide and the emblem at 48 pixels or 12 mm; inspect at actual output size. Use the emblem for tiny placements. Feather and eye details simplify at 32 pixels.

Production

SVG and PDF files are vector artwork with outlined lettering. PNG logos have alpha transparency, while the white badge stays opaque. JPGs have white backgrounds. Social files are opaque and ready to use. Colors are RGB: ask the print provider for the final profile conversion and proof. For small embroidery, use a single-color emblem and confirm detail reproduction with the fabricator.
